(54) MANUFACTURE OF CELLULOSE TRIACETATE FILM

(57)Abstract:

PURPOSE: To enable a cellulose triacetate film which is excellent in a planar property even though dried quickly at high temperature in its manufacture by a solution film-forming method.

CONSTITUTION: A cellulose triacetate film stripped off from a flow-extending part 10 is dried with drying parts 20, 30. The cellulose acetate film dried with the drying parts 20, 30 is sent to a planar property improving part 50. It is carried while being wound around a heating roller group 54 in a heating chamber 51 of the planar property-improving part 50, and unevenness generated with the drying parts 20, 30 is leveled. Just thereafter, it is solidified under a planar state as it is while being wound around a cooling roller group 56.
